Sheet show condition

- Reference Master Measures
- Video Player
- Grid chart
- Other improvements
    - DatePicker custom buttons and range
    - Single click in mobile view
    - New engine functions
    - Reload actions in the button

Sheet show condition
## More control over app content

The visibility of a sheet can now be controlled with a show condition.

The show condition can be any expression that evaluates to true or false.
Hidden sheets are always visible to the app developer.
Controlling sheet visibility is a neat way to control and adapt app content towards different groups of users.
• The main purpose of the sheet show condition is to manage app content
• Sheet show condition is not a security function,

Video player
Control for playing video content

- In app player for video
- Part of the Dashboard Bundle, in house product.
- Useful for training material and tutorials etc.
- Play Mp4, WebM and Ogg files
- Based on customer request
- In QS SaaS URLs needs to be whitelisted

- Note, iOS can only play certain MP4 encodings.

Video Player
Control for playing video content.
Version: 0.11.0

Reference Master Measures
Improves governance and productivity

It's now possible to use master measures within
expressions. And also referring to other master
measures within a master measures. Example:
Master measures:
SumOfSales =sum(Sales)
CostOfSales =sum(Cos)

Profit = SumOfSale - CostOfSales

Being able to refer master measures
increases productivity for the app developer and
helps the governance of master measures.
Code can be kept dry, less need for copy.

Expression

SumOfSales-CostOfSales fx

Grid Chart
## Measure across two dimensions

Useful for showing one or two measures across
two dimensions.
Part of the visualization bundle, in house product.
Similar as scatter plot but any two dimensions
can be used. Scatter requires two measures.

Usage:
- Two Dimensions
- Measure for bubble size
- Measure for bubble color
- Grid lines on/off
- Scroll bar or All axis values visible

Other improvements
Smaller but essential enhancements

DatePicker: getting custom buttons for predefined ranges and range select improvements.

New script functions: for Sense and Coalesce (exp, exp,...): Returns the first not null expression. Less need of nested if statements.

EmptyIsNull (exp) : Returns null if expression is empty string. Shorter, cleaner code.
LevenshteinDist (str1, str2) : The minimum number of single character edits to turn string 1 into 2. Useful for fuzzy string comparisons.

Single click in mobile view: button and slider interaction without maximize.
Reload action: the button getting actions for partial and normal reloads.
